The Appearance of the Chion

The sharp smooth beak, which is bright yellow is so shiny that you could see yourself in the reflection. The orange and black spotted legs can reach speeds of 121 mph in 35 seconds and so could escape from its vicious and sneaky predators. Its ears are so sensitive that it can hear sounds from over seven miles away. There are different species, some of which, do not even have ears! Its eyes are like those of an eagle and are used for searching for food over long distances

This rare animal has the body which is similar to a police dog but is so well camouflaged that you would not be able to see over long distances.

Last but not least, its tail! The tail is very interesting because it disappears at night and is there again in the morning. No one is sure why this happens, but it wouldn't it be interesting to find out?

Christmas

Conquers

This is them playing football.

Interesting things are being reserved in letters from the front line. Amazingly British and German soldiers dropped their weapons and joined together to celebrate Christmas on Christmas eve an astonishing event occurred firstly German soldiers

started singing Christmas carols. British soldiers thought it was a trick but soon realised they were just celebrating Christmas. So they joined in too. "At first I thought I was dreaming" mentioned a British soldier. It was even reported

that they played a game of football!! "I couldn't believe it. I was actually playing a game of football in no-man's-land" cried a British soldier. The Germans realised they had fun too.

Life in the Trenches

As we know the conditions in the trenches are becoming life-threatening. We have received updates informing you what's been happening in the trenches. It was discovered that the food was

cooked in the same pots as a result everything taste different. Also bread was made from stale flour and saw dust and ground twigs. It was even reported that by the time food reach the front line it was hard. Sometimes a glass

of soldiers could make a stove to heat their food up. "It is killing for my jaw getting hard blind" mentioned a British soldier. Rats and lice

It was said that both British

and German soldiers were forced to share their trenches with unpleasant creatures such as horned beetles, fat red slugs but worst of all rats and lice. They eat your food and crawl all over you. Why you sleep. The soldiers fought back by shooting. It was reported that if the sergeant saw them they would have to do extra work for wasting bullets. Every body in the trench is behind you.

Walti use fronted prepositional ~~phrases~~ ^{phrases}

The Rhinoceros poacher is a human because they are poached by hunters. It jumps the hunters track the Rhinoceros using a GPS signal. Once the hunters find the animal, they slowly and quietly ^{approach} ~~approach~~ the Rhinoceros. Hiding behind the bushes, the hunters look through a gap and take aim with their rifles. They load the guns and shoot the Rhinoceros leg so ^{that} it can't escape. Then the ~~hunters~~ hunters strip the animal and sell the skin overseas. However not all poachers attacks are successful.

- Some times the Rhinoceros becomes aware of the hunters and attacks them instead.

✓ A superb effort Algie - I love how you included fronted prepositional phrases too.

Sneaky Snakebird

Snakebird, which is a special type of snake, is pretty extinct. Has a beautiful snake/boa form. His outer/skin feathers are hard to be true. Have you tried to detect this deadly, life-threatening creature? He lives in Africa with vulnerable other snakebirds. Would you help this vulnerable creature from becoming extinct?

Appearance
Snakebird's skin, which is scaly, slimy and slippery. Can wiggle around on soft ground. Snakebirds are all very pinky so that he can burrow out for close positions. His strong, muscular legs to jump around on rough ground. His long, tough, some of his small positions. His skin can be seen through with leaves and rocks.

Extinction
Walking in the bushes, the person further stalks the Snakebird, pushing to strike from behind the rocks. It listens and stays for any sounds and then pounces. It knows (it should be obvious) that it can avoid being seen, however there is always danger of a shock attack.

Habitat
Snakebird, who lives in some desert habitats. Can be often found in: Palm forests, bushes, grasslands, open fields and rocks. In daytime they're asleep until dusk. At night if you come looking for one you will be able to hear the leaves crunching.

Diet
Snakebird who is a herbivore also eats meat. Snakebird who eats slugs. Unlike most carnivores, the snakebird eats Zebra but crawls up on them. Snakebird can also eat birds by pouncing over them. **PLEASE EATS HUMANS!** Don't annoy Snakebird. Snakebird shares his nest eggs.

MEASUREMENT

Thinking Tom says;

"200 millimetres is the same as 2 metres."

What do you think?

Convince Me!

$100 \times 2 = 200$ cm in a m
 $200 \times 10 = 2000$ mm in two m
 in a m is 1 thousand mm
 so in two m is two thousand
~~two~~ thousand. No ✓✓
